COMP 484 : Final Project
SportsBook

By:

-Sachin Bhalekar

-Sumit Jawale

Problem

> *"I want to play tennis, but there is no one in my circle who is interested."*

- People interested in sports, sometimes end up alone and no one to play with.
- Some sports (e.g. tennis) can't be played alone with that interest.
- Finding a buddy to play along gets difficult if you don't know people sharing common interest.

Solution

> *"I wish I could find someone who shares a common sports interest with me!"*

- A web portal where users can post sports activities.
- Other users with similar interest can see the post and meet up at the mentioned time and play their favorite sport.

Approach

> *"SportsBook can solve my problem!"*

- Google Map APIs to map users in a particular location.
- When a user posts an activity on SportsBook, other users nearby the mentioned location can see and join this activity.

Technology/ Framework

HTML5

CSS3

JavaScript

PHP

MySQL

Google Map APIs

AJAX

Bootstrap 3

DEMO

To-do List

1

Making the site public (including the MySQL DB)

2

I'm Interested button.

3

Segregating different codes for proper maintenance.

Thank you!
